

ecocanopy™ SIACRA-P Exhaust Hood

Introduction

ecocanopy™ SIACRA

The SIACRA-P island exhaust hood with ecoaircurtain™ technology operating on 3 sides is the ultimate hood in the ecocanopy product range. This is a highly efficient kitchen ventilation hood that removes soiled air and excess heat emitted by cooking equipment. The SIACRA-P exhaust hood requires approximately 30% less exhaust air volume flow than traditional hoods. This reduces overall energy consumption and allows supplementary filtration systems such as UV, HEPA and Carbon to react better with the effluent air.

How it works

The ecoaircurtain™ contains the smoke and heat within the perimeter of the hood. As the grease and heat laden air rises up, it is gently guided by the ecoaircurtain away from the chef and towards the ecoshield™ Baffle filters. This ensures effluent air is extracted out and does not escape into the kitchen environment. SIACRA-P hoods require lower air volume flow rates as the canopy is not relying solely on the force of the extraction to capture the effluent air.

Specifications

Sizes: L= 1000mm - Unlimited, W=1000 - 1700mm, H=400 - 800mm (*custom heights and tapers also available*)

Material: 1.2mm 304 No.4 S/S

Lighting: 36W twin tube fluoros or 12W LED Downlights

The ecocanopy™ SIACRA exhaust hood is a *full stainless steel* fabricated *CodeMark approved* canopy, designed and manufactured in Australia.
